PROFESSIONAL EXPERIENCE

Oncorp — Backend Developer | Consultant **2025 – Present**

Project: Colegio de Químicos Farmacéuticos (CQFH)

- Built ETL processes with SSIS and Python to clean, transform and load over 100K records from Excel into the database.
- Designed database objects (stored procedures, views, functions) to consolidate and query the loaded data.
- Developed a REST API connected to the database to expose the data to the system.

Project: BANADESA (CINOP) — Conditional Cash Transfers

- Implemented per-institution data isolation through a separate schema for each one (single-tenant approach) and role-based access control.
- Developed the frontend and a REST API connected to the database and cache for the transfer payment management system.
- Integrated printers and fingerprint readers into the web system through a local API and the device SDK.
- Managed the deployment of the applications on a VPS server using containers.

NACEL — Fullstack Developer | Internship **2025 – 2026**

Project: Field work tracking system (tower installation)

- Developed a project manager for telecommunications tower installation: frontend and REST API with hexagonal architecture.
- Integrated an external field-tracking API and stored the data in a normalized database.
- Automated testing and continuous deployment (CI/CD).

Project: Power BI Dashboards — Field operational efficiency and cost control

- Designed executive Power BI dashboards with scheduled refresh from the tracking system's transactional database, for periodic monitoring of operations.
- Built field work efficiency indicators: progress per project and productivity per crew.
- Developed the cost and expense analysis per project, identifying the categories and stages where spending is concentrated to prioritize optimization actions.

Zsystems — Fullstack Analyst and Developer | Consultant **2022 – 2025**

Project: Accounting system — Pentecostal Church

- Designed a multitenant database that logically separates each institution's data.
- Developed a web accounting system used by a network of more than 140 institutions.
- Gathered requirements and developed the backend with the MVC pattern.

Project: Inventory management — Industrial Workshop

- Designed a normalized database for inventory management, ensuring the integrity and consistency of product, supplier and movement data.
- Generated inventory and movement reports to support the workshop's control.
- Developed stock control with entry and exit records, and traceability of each product's movement history.
- Implemented a product catalog and minimum-stock alerts to anticipate replenishment.
- Gathered requirements with the client and developed the backend with the MVC pattern.

Project: Medical appointment management — Oncology Hospital

- Modeled the database and programmed the backend with the MVC pattern.
- Gathered requirements and developed the medical appointment scheduling system, now in production.

TECHNICAL SKILLS

Backend Development: Java, PHP, Python with Laravel, Spring Boot and FastAPI for building REST APIs, enterprise systems and scalable architectures.

Frontend Development: JavaScript, TypeScript with React, Next.js and Astro. Styling with Tailwind CSS and Bootstrap for responsive, maintainable interfaces.

Databases: MySQL, PostgreSQL, Oracle PL/SQL, SQL Server and Redis. Schema design, query optimization and data integrity.

Business Intelligence & Data: Tableau, Power BI, Data Warehouse, SSIS and pandas for building ETL processes, reports and data visualization.

DevOps & Infrastructure: Docker, Terraform, Azure Cloud (App Service, ACR, SQL Database, Data Factory, Cache for Redis, Storage, Application Insights, Functions, Pipelines), VPS, Git & GitHub and Linux for deployment, automation and environment consistency.

Development Tools: Postman, Swagger, Insomnia and Jira for API testing, documentation and project management.

Agentic Development: Claude Code, skills, MCPs (Model Context Protocol) and harness engineering to design AI agent-assisted development workflows.

EDUCATION

National Autonomous University of Honduras (UNAH) | 2020 - 2026

Degree: Systems Engineering, Tegucigalpa, Honduras.

Skills acquired: Effective communication, teamwork, analysis and design of business requirements for enterprise systems. Implementation of business intelligence tools: Data Warehouse, OLAP/OLTP, CRM, DSS/EIS. English level: Intermediate (B1).

CERTIFICATIONS

- Java Fundamentals - Module 2 | INFOP | August 2025.
- Database Programmer with PL/SQL | INFOP | August 2025.
- Oracle Database Design and Programming | INFOP | November 2024.
- Core Java Concepts - Module 1 | INFOP | November 2024.
- Oracle Database Design | INFOP | June 2024.
- Oracle Database Fundamentals | INFOP | June 2024.
- Oracle Next Education Program F2 T5 Back-end | Alura Latam | September 2023.
